

AUDIO VIDEO CABLES

HDMI™

Y.C. Cable incorporates High-Definition Multimedia Interface (HDMI™) technology. This cable is the first industry-supported, uncompressed, all-digital audio/video interface. HDMI™ provides an interface between any audio/video source, such as a set-top box, DVD player, and A/V receiver and an audio and/or video monitor, such as a digital television (DTV). HDMI™ supports standard, enhanced, or high-definition video, plus multi-channel digital audio on a single cable. It transmits all ATSC HDTV standards and supports 8-channel digital audio, with bandwidth to spare to accommodate future enhancements and requirements. HDTV uses less than 1/2 of HDMI™'s available 5 Gbps bandwidth. With capacity to spare, HDMI™ can incorporate new technology advancements and capabilities long into the foreseeable future.
